

Oregano Information

Stat Summary

Plant Spacing: 6-10"

Row Spacing: 8-12"

Planting Depth: 1/4"

Plants Per Person: 1

Soil Temperature: 65-75°

Days to Emergence: 10-20

Recommended Soil PH:

Seed Indoors: 8 weeks before transplanting

OUR VARIETIES

Greek Oregano

Mexican Desert Oregano

Earliest Outdoor Planting: After Last Frost

✓Can direct seed outdoors

✓Can seed indoors

Planting Information

Prefers full sun and well drained average soil. You can start with a purchased plant or start seeds indoors then thin to the most fragrant smelling seedlings. After hardening off seedlings, transplant in garden soil after the last expected spring frost about 6 to 10 inches apart in rows 8 to 12 inches apart.

Growing Information

Control oregano's spread by cutting back flowering stems when their colors fade.

Harvesting and Storing Information

Oregano leaves are most flavorful before plants flower. Pick individual leaves as soon as the plant is large enough for your use. Store fresh oregano in plastic bags in the refrigerator. You can dry oregano by hanging cut stalks in a warm, airy location; store dried leaves in a sealed jar.

Insect and Disease Information

Oregano is seldom affected by pests or diseases.

Yield Information

No yield information for Oregano.
